

Top Trending Million Dollar Apps Startups Must Invest in

No comments

*Would you like to create your own mobile app that earns you millions of dollars?
Would you like to come up with innovative app ideas for your startup? We have rounded up an array of industry-specific mobile apps ideas that can be a big hit in this mobile world if you are a business owner. The iOS and Android markets are getting bigger by the minute. Today, **developing mobile apps** in collaboration with expert mobile developers is the most profitable business model.*

The Best app ideas for Startups and their significance

Listed here are top ideas and technologies that are trending and are likely to continue trending in the coming years. We have grouped some entries into categories to keep the list from being too long and repetitive.

App Ideas to start your Own Business

Anonymous Communication Apps

Our lives need to communicate. At the same time, social media has been plagued by privacy scandals in the last few years. Add to that situation where no one around you shares your love for certain ideas, which requires you to find people outside your regular circle to share those ideas with. As a result, anonymous messengers and social networks have grown in popularity. Anonymous communications systems conceal an individual's IP address from the server hosting a website they visited. The anonymous technology conceals the user's IP address from the anonymizing service and encrypts the traffic between the user and the service, but not all. You can bring your creative mobile app ideas to life if you find a company that develops apps like [Arashtad mobile development](#) in this niche today.

Private Messengers Mobile Apps

Would you be interested in developing messaging software? Is your organization need a new chat app that streamlines business processes? Do you want to innovate the messaging app market? Developing a communication app is not difficult today. Privacy and the trend of data encryption are not short, and as more messengers are being blocked, the demand for these apps is expected to grow. Developing your own messenger for a startup is a good idea. Furthermore, data encryption with private access only offers value on the market. [Arashtad.com](#) provides stability in your messenger app, making it easy for people to converse securely.

NFT and Metaverse Apps

Metaverse refers to a new system of virtual worlds connected by blockchain. It offers a variety of opportunities to consumers and artists. In metaverses, users can create virtual assets and monetize them. Creators can apply their artistic abilities to everything from virtual clothing to games and events. Virtual assets can be sold or bought by metaverse asset creators. The market for virtual assets will continue to grow as the metaverse gains popularity and

societal acceptance. Many people visit the metaverse to consume and connect. The concept is similar to hanging out in the hypermarket with colleagues. Now is the time to develop a new creative skill and even turn it into a business. Contact the [Arashtad team](#) to design and develop mobile-based apps.

Gaming Apps

With mobile games becoming increasingly popular in recent decades, it is only natural to see increased requests for new game app ideas, especially for Android devices. Mobile game developers are also in high demand to turn your mobile game ideas into reality. Like game developers, mobile device companies also need to constantly evolve to meet the development of the mobile gaming market. In Arashtad Unity, we design and develop main trends in the mobile game market that the audience enjoys. For more information [contact us](#).

Mobile Payment Systems

Users can use mobile payment systems to make payments using their phones by scanning codes, NFC, cloud services, etc. There is a rapid increase in the number of users installing these apps because of their convenience. With these services, your users don't have to pull out their purses or look for a card or cash anymore. They just open an app, scan the barcode or QR code, or transfer money using the receiver's phone number. Furthermore, users can earn cashback when they shop in your partners' places or purchase movies, trains, and flights. It is equally important to pay close attention to security. According to Accenture, 19% of respondents claimed that mobile payments might lead to fraud due to three significant risks:

- 1- Having lost a device
- 2- Cyber attackers
- 3- Malware

However, new technologies, such as FaceID, Touch ID, and passcode, will protect you. It can be tough to come up with good ideas for mobile apps, especially when you are trying to find some good ones! If you haven't started yet, [contact us](#) for more information.

Blockchain-Based Mobile Apps

Blockchain technology is one of the new technologies that startups are using since it is associated with cryptocurrencies like Bitcoin and has been popular for a long time. This technology is now being used in mobile apps to make transactions faster and secure the most critical information of users. Blockchain technology was initially viewed

as a base for the stable operation of all cryptocurrencies. Still, now it is being seen as a database that can be used by almost any mobile application. Blockchains are decentralized ledgers that track transactions between various parties and are shared by all stakeholders. By doing so, the system becomes very transparent, and the app becomes more secure since fraudulent transactions cannot occur, and anyone cannot tamper with the transactions without the stakeholders' knowledge.

As a result of this technology, multiple areas can be integrated. Digital transactions are made more accessible by utilizing new methods through blockchain protocols, and peer-to-peer transactions in mobile apps are a natural fit. In other words, blockchain maintains irrevocable and dedicated records of transactions, depending on the requirements of the mobile application. Blockchain applications can significantly disrupt existing business models by providing lower-cost instantaneous solutions. Blockchain protocols can improve access to digital transactions through the use of new methods. By using blockchain, manual, time-consuming processes can be automated.

Augmented reality mobile apps

There is a great deal of potential in Augmented Reality, which is commonly known as AR. The possibilities with AR are highly indulging the different industries. Augmented reality is a form of reality enhanced with a digital component. The technology adds digital details to our real-world experience by displaying digital visuals on real-world objects. In contrast to VR, it doesn't establish an entirely new environment. Rather, it enhances the intuitiveness and data of existing articles. In essence, it superimposes computer-produced images on any article, giving it the appearance of a live projection. Suppose you've ever played cell phone games that involve using your phone's camera to interact with projected characters.

These unbelievable applications utilize Augmented Reality. Isn't this innovation the springboard for further advances in cutting-edge technology? There is no question it will. We will utilize these things as our lifestyles change and evolve towards a more computerized way of life. These elements will combine to form an intelligently coordinated way of life. Augmented reality begins with a camera-equipped device. To do this, you need a camera. Once you have the camera, you need AR software. The camera can be on your smartphone, desktop, laptop, tablet, or smart glasses. Through computer vision technology, which evaluates the video stream, the software recognizes an object when the user moves around it.

Conclusion

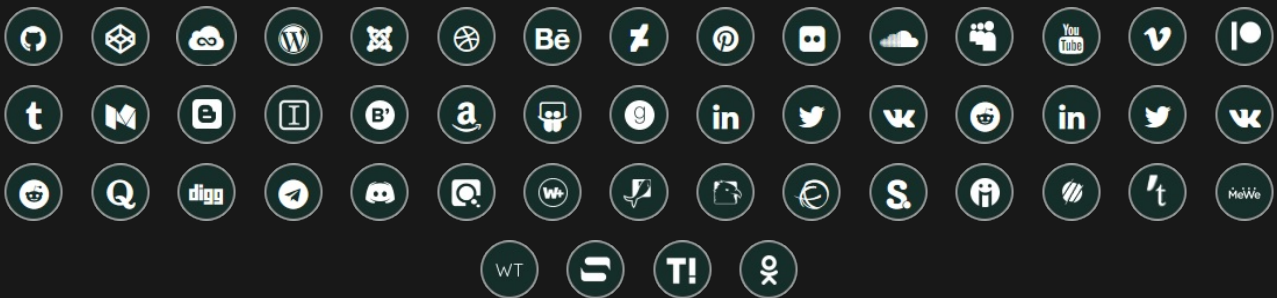

The technological world has come a long way. Life would be impossible without a variety of high-tech apps and resources. Mobile app development, without question, brings something special to the table. Due to this, we are confident that the mobile app development industry will have a bright future. This is a significant step forward for the technological revolution. This blog will be helpful if you want to stay on top of the latest technology advancements. You can indeed approach the mobile app development Arashtad company to make it happen. We have compiled a list of mobile app trends that could propel you to prominence.

With each passing generation, technology continues to advance and improve. Immersive technologies are being introduced by brilliant developers all over the world to make people's daily lives easier. staying current with the latest technological advancements is important. As a result, we compiled a list of the most popular startup mobile app development trends. So, without further ado, let's get to design and develop these ideas through [Arashtad mobile apps development](#).

Join Arashtad Community

Follow Arashtad on Social Media

We provide variety of content, products, services, tools, tutorials, etc. Each social profile according to its features and purpose can cover only one or few parts of our updates. We can not upload our videos on SoundCloud or provide our eBooks on Youtube. So, for not missing any high quality original content that we provide on various social networks, make sure you follow us on as many social networks as you're active in. You can find out Arashtad's profiles on different social media services.

Get Even Closer!

Did you know that only one universal Arashtad account makes you able to log into all Arashtad network at once? Creating an Arashtad account is free. Why not to try it? Also, we have regular updates on our newsletter and feed entries. Use all these beneficial free features to get more involved with the community and enjoy the many products, services, tools, tutorials, etc. that we provide frequently.
